Version 8.6 is On The Way

(Fargo, ND - 6/15/09)

Allegiance Version 8.6 of the Fundraising System will be ready for release next month. Here are a few highlights:

- A quick query function provides a flexible way to get lists of donors and very specific information about them, and in some cases you'll be able to do it 100 times faster. Several people at multiple workstations can use it simultaneously without significantly impacting speed. In addition, new segmentation capabilities provide many more options for sophisticated queries, which will continue to be simple to create.
- A query tool for journals provides more flexibility and ease for conducting research within the database.
- A premium query tool allows you to do an on-screen search of a specific item and see everyone who has received it and everyone who is waiting for it. Rather than printing reports, you will be able to do searches and see results immediately.
- Fields have been expanded to allow more keystrokes in defining searches.
- A tracking system in the Expanded Premium Module uses tracking numbers to provide information on exactly when items have been shipped.
- A drag and drop scheduling function in the Volunteer Management System allows you to schedule volunteers on-screen by simply dragging and dropping a volunteer's name into the timeslot you desire.

The enhancements prepare our database for the release of Version 9.0 next year, when you will see significant visual differences in the software and its functionality. The Version 8.6 release will help you avoid major upgrades.
